

## KAPPA SKI Q3Q4 2011

The **Fall/Winter 2011-12 Kappa Ski** collection proposes technical engineered items for skiing and other sports disciplines for all types of sportsmen: from professionals to amateurs.

### **SKI 4CENTO**

The whole 4Cento line is obtained from the matched 4-layer comfort fabric **Kappa Cold Buster®**: the technical fabric designed to dress the athletes during competitions which has overhauled the concept of technical skiing wear, offering items 50% smaller than the traditional ones and guaranteeing at the same time very high performances.

**Kappa Cold Buster®** includes:

the 1st external layer in **nylon bi-stretch TEFLON®HT**: water-proof & stain-resistant shield

the 2nd layer in **polyurethane membrane**: highest waterproofing and breathability

the 3rd layer in **100 gr. THINSULATE® padding**: excellent warmth

the 4th internal layer in **stretch pile**: soft touch and isolating antipilling microfibre

The whole 4Cento line is the result of the consolidated experience of the **Kappa Research & Development Centre**, which has relied upon the constant cooperation of athletes and professional teams also of extreme skiing. The very high performances of this special and patented fabric have been combined with ergonomic and anatomical cuts and heat-sealed seams to guarantee the highest protection against water and wind.

All the products of the 4Cento line have been designed paying attention to the smallest details to meet the needs of the ski professionals: comfortable and essential pockets, drawstring and chin protection, internal wrist flaps in hand-warmer thermal fabric, moreover they are very easy to maintain as they can be easily washed in the washing machine.

What makes these items unique in their kind is the combination of highest technical properties and design, thanks to which they can be used everyday in the city.

### **SKI 6CENTO**

The **6Cento** line – the traditional ski item by Kappa with highly performing contents at very competitive prices – proposes in this season innovative solutions for the mountains and the city: they can be combined together or used separately.

This program has been developed going from the heavy down for the most extreme conditions to the lightest one, which can be used as an additional thermal layer or by itself, as essential protection in less difficult weather conditions.

Notwithstanding the **very high warmth**, the items of the 6Cento collection are all very light and can be perfectly combined one with the other both in terms of colours and patterns.

The classical item of this collection, the 6Cento jacket is made up of bi-stretch fabric and is completely heat-sealed: an excellent snow, wind and cold protection product.

Special attention is also paid on the baggy padded trousers for the freestyle, designed for women and men, with an ergonomic but comfortable fit, available in more colours and patterns. The offer includes also items to be used as first or over layer: pile and nylon jackets which can be combined in infinite ways also with very light and innovative shells.

The uniqueness of this product, together with all the above-mentioned characteristics, makes this collection ideal for kids and adults, for the mountains and the coldest days in the city.

### **SKI 8CENTO**

With 8Cento, Kappa presents a collection of **basic technical skiwear** including everything you need to ski or better the bare minimum for skiing: jackets and trousers in the classical padded version, down jackets and fleece.

Items of clothing designed in a wide range of colours, functional and technical, fully heat-sealed and water-proof at 2000 m obtained from excellent materials such as natural leather and proposed – with the best quality/price ratio – at extraordinarily competitive prices.
