

The fall winter 2012/13 **Kappa[®] Ski** collection proposes technical engineered items for skiing and other sports disciplines for all types of sportsmen: from professionals to amateurs.

KAPPA SKI 4CENTO

The whole 4Cento line is obtained from the matched 4-layer comfort fabric **Kappa Cold Buster[®]**: the technical fabric designed to dress the athletes during competitions which has overhauled the concept of technical skiing wear, offering items 50% smaller than the traditional ones and guaranteeing at the same time very high performances.

Kappa Cold Buster[®] includes:

- the 1st external layer in nylon bi-stretch TEFLON[®] HT: water-proof & stain-resistant shield
- the 2nd layer in polyurethane membrane: highest waterproofing and breathability
- the 3rd layer in 100 gr. THINSULATE[®] padding: excellent warmth
- the 4th internal layer in stretch pile: soft touch and isolating antipilling microfiber

The whole 4Cento line is the result of the consolidated experience of the **Kappa** Design&Research Centre, which has relied upon the constant cooperation of athletes and professional teams also of extreme skiing. The very high performances of this special and patented fabric have been combined with ergonomic and anatomical cuts and heat-sealed seams to guarantee the highest protection against water and wind. All the products of the 4Cento line have been designed paying attention to the smallest details to meet the needs of the ski professionals: comfortable and essential pockets, drawstring and chin protection, internal wrist flaps in hand-warmer thermal fabric, moreover they are very easy to maintain as they can be easily washed in the washing machine. What makes these items unique in their kind is the combination of highest technical properties and design, thanks to which they can be used everyday in the city.

KAPPA SKI 6CENTO

The 6Cento line proposes the classic ski items by **Kappa**, designed for men and women, with highly performing contents.

The classic item of this collection, the 6Cento jacket, is made in bi-stretch fabric and is completely heat-sealed: an excellent snow, wind and cold protection product.

Special attention is also paid on the padded trousers with regular fit and baggy wearability: ergonomic but comfortable, available in more colours and patterns.

The latest new of this season: the 637 and 639 down jackets in comfort fabric, with stretch inserts and heat-sealed seams.

The uniqueness and the characteristics of products make this collection ideal for the mountains and the coldest days in the city.

KAPPA SKI 8CENTO

With 8Cento line, **Kappa** presents a collection of basic technical skiwear including everything you need to ski, or better the bare minimum for skiing: jackets and trousers in the classical padded version, down jackets and fleece.

KAPPA SKI GARA FISI

This line offers ski products designed for F.I.S.I. by **Kappa** Design&Research Centre. The items are subject to strict controls that certify the best performance, ensuring – with Italian style and design – the highest world standards in technology and quality. Thanks to patented innovative technical fabrics and engineering the construction process, each piece ensures protection, comfort and performance.
